Oracle Tutorial

2025-26

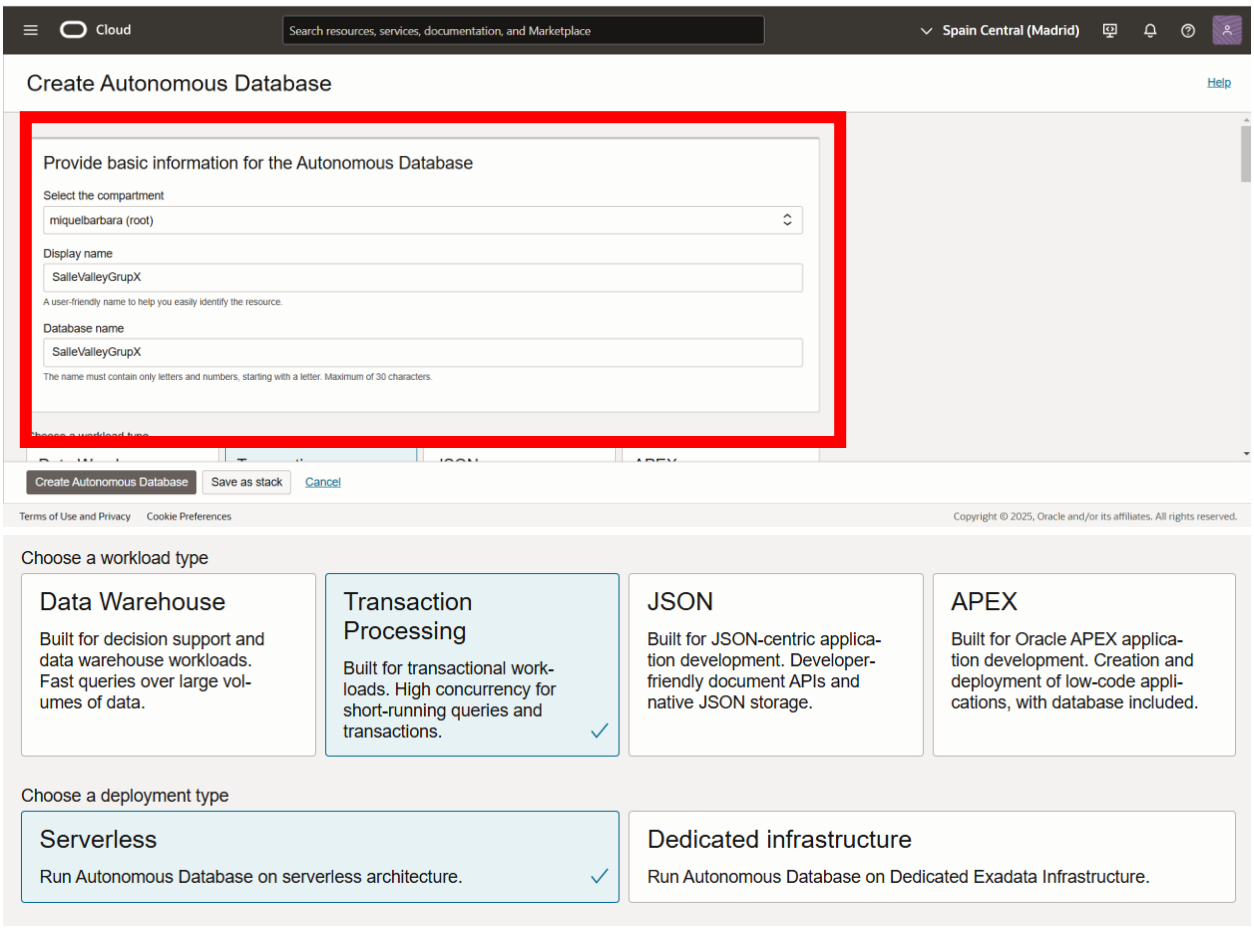

1. Accessing Oracle Cloud

1. Log in to Oracle Cloud with your credentials (Check that your browser supports it, ex: Chrome).
2. In the right part you will see an option called **"Autonomous Database".** This part only needs to be done by one member of your group.

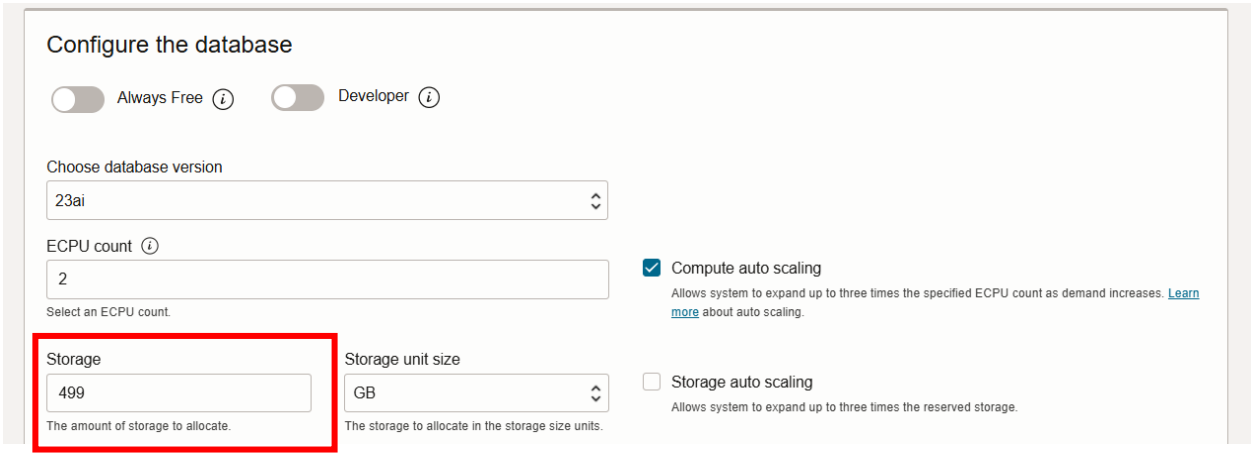

2. Creating the Database

1. Click on **"Create Autonomous Database"**.
2. Fill in the following fields (not mentioned fields will mean that we left it by default):
    a. **Select the Compartment:** Choose the appropriate compartment.
    b. **Display Name:** The database will be SalleValleyGrupX where X should be your assigned group.
    c. **Database Name:** Same as the Display Name.

d. **Database option:** Choose the version 23ai.
e. Storage: By default, the storage will be more than 1TB. This result into an unexpected error so we have to decrease it, 500 GB should be fine.

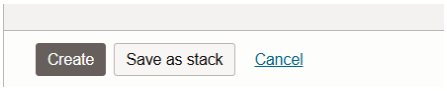

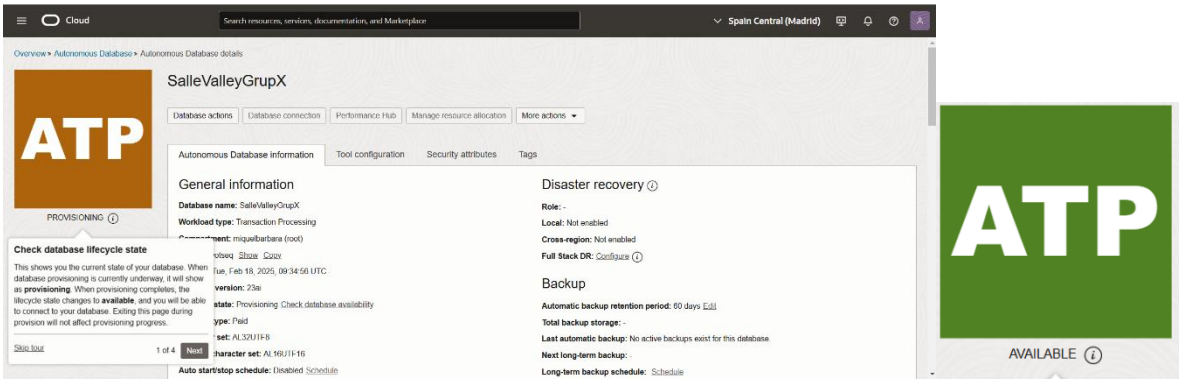

f. **Create administrator credentials:** The person that will be ADMIN have full control of the database. It is important to save well the password. You can

share this account with your teammates or you can create a new users and give custom powers in the database (Check section 3).

3. Finally create your database and automatically it will be creted and you will return to the database home page. Your database will be in available onces the ATP icon turns green.

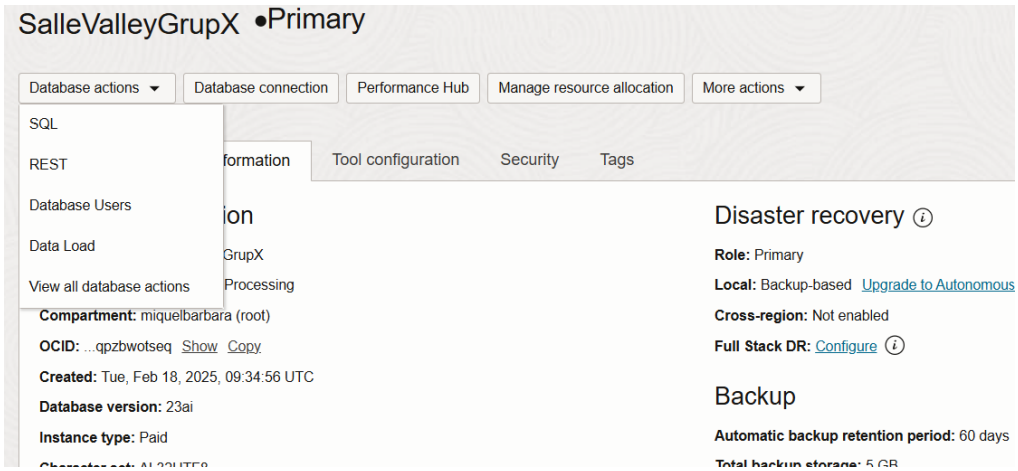

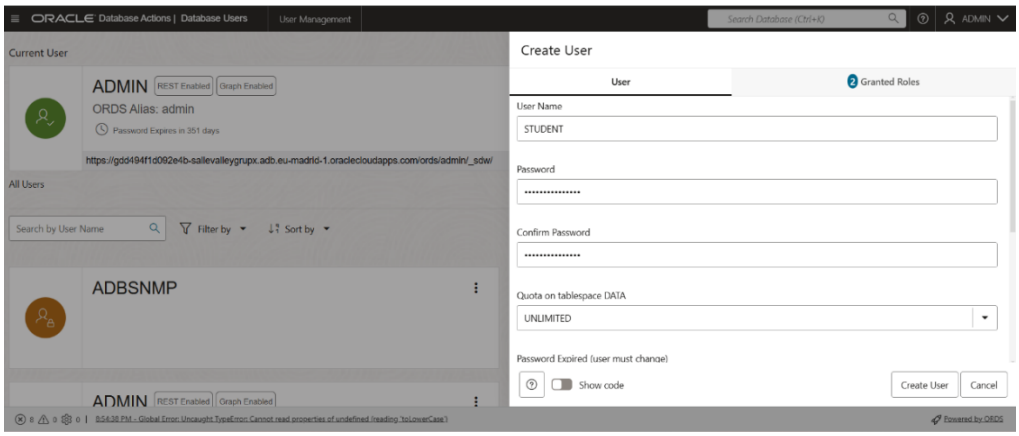

3. Creating the Users

1.Now that we have the database operational, we have the option to create one or more users so that all team members can access it with different permissions. You can all share the ADMIN account if you want, and all the users will have full access to all options in your database.

a. Click on Database actions -> Database Users

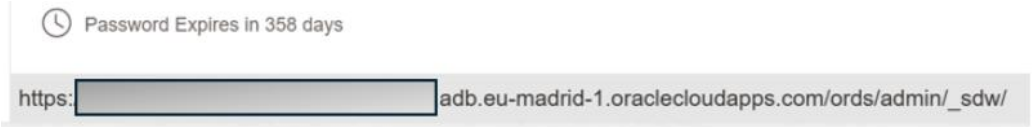

b. A new page will be open, you can see the ADMIN user that we created before, let's create another user by going to the Create User option.
c. You can grant this user specific permissions

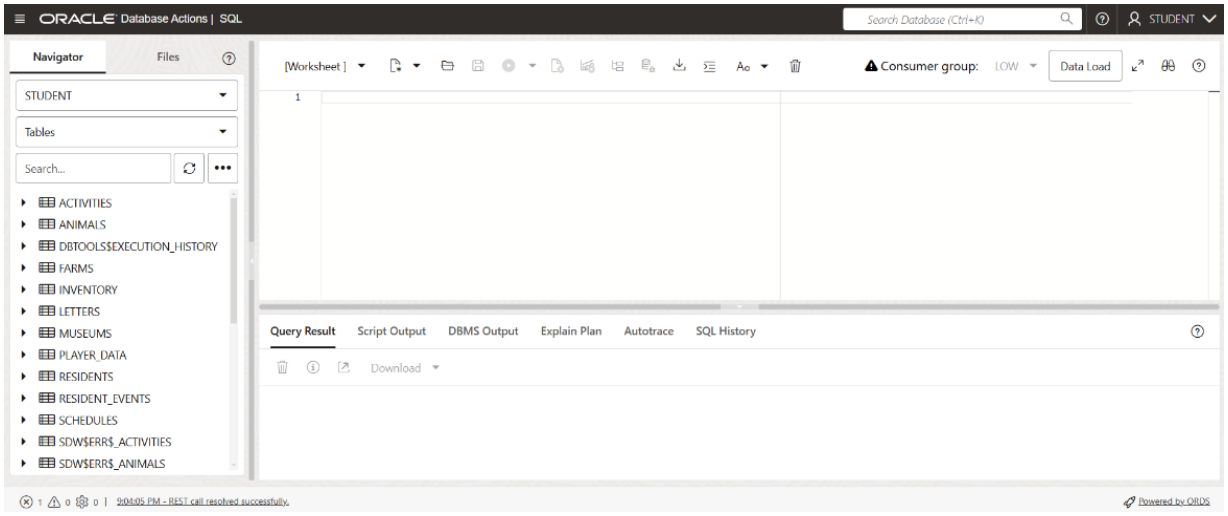

4. Workspace

Now you can access your database and create .sql to manage your database.

To **access the workspace** along with the database that has been created, you can use the link found in the "Database Actions / Database Users" tab. At the bottom of the created user (for example, STUDENT), you will find the link that provides access to all group members.

You can import easily the CSV by dragging them to the left side of the workspace. Then when all the files are pending you can click Upload to import the CSVs.
