Oracle Tutorial CSV

2025-26

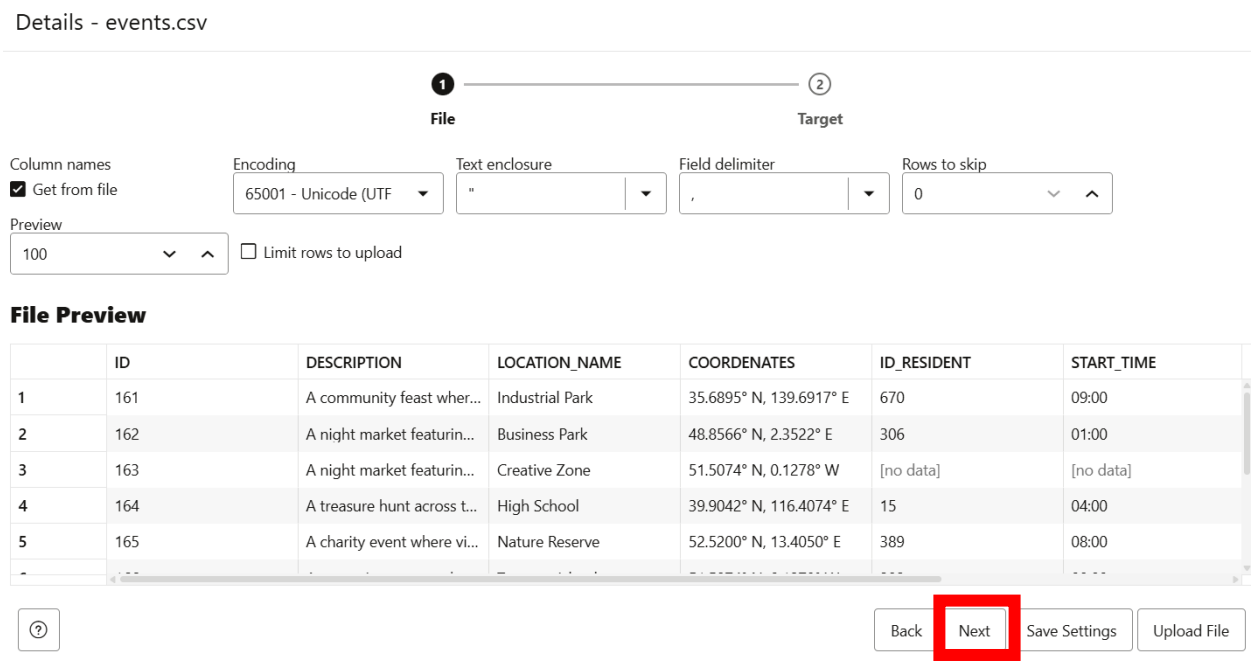

Drag your CSV files into the left side of the Oracle workspace. A new window will appear displaying the dragged files. Wait until the status of each file shows as **PENDING**.

Before uploading, it's essential to verify and adjust the settings for certain files to avoid data issues.

On the right side of each file, click the three-dot button (⋮) and select **Settings**.

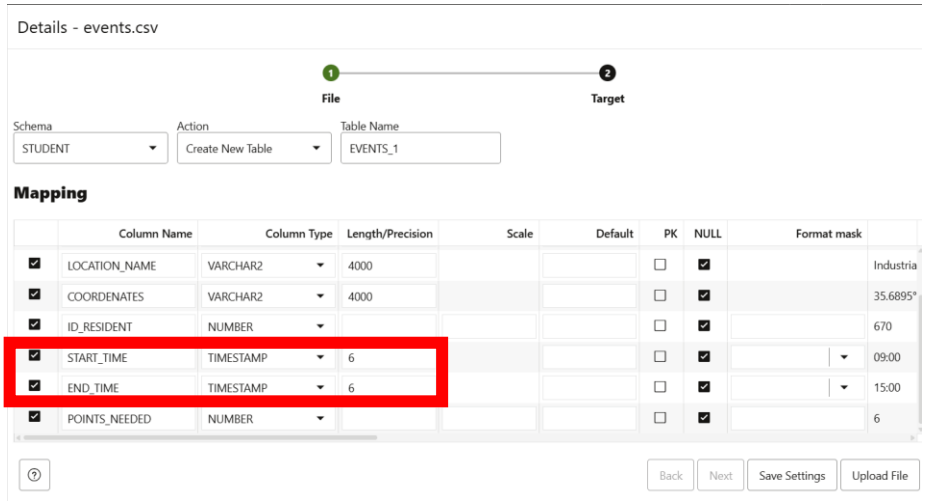

This action opens the **Detail Page** where you'll see the data preview for each column and row, ensuring data accuracy before proceeding.

There are **three CSV where we will have to access the Next section** which are:

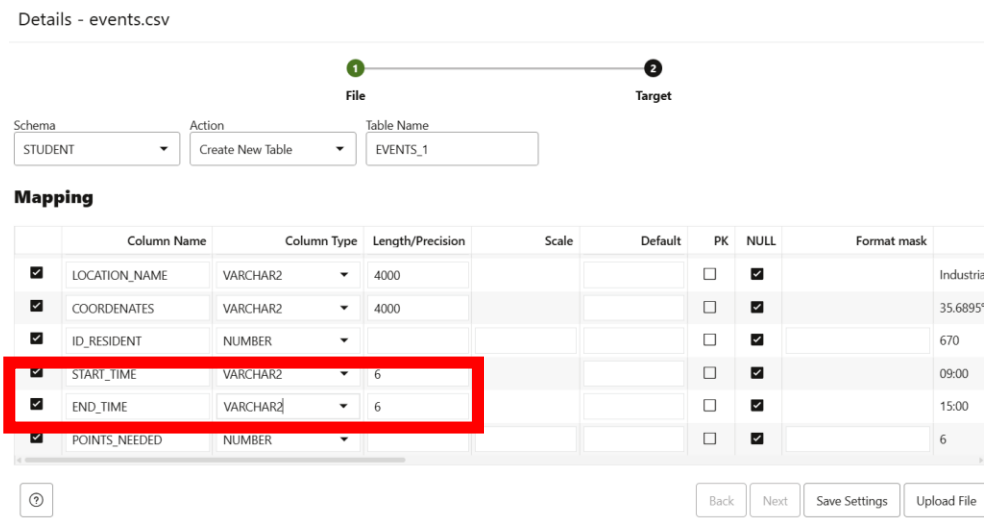

1. Events
2. Inventories
3. Schedules

These files include time data formatted in a 24-hour clock (e.g., `9:00`, `13:00`, `24:00`). Oracle often misinterprets these values as **TIMESTAMP**, resulting in NULL values upon import.

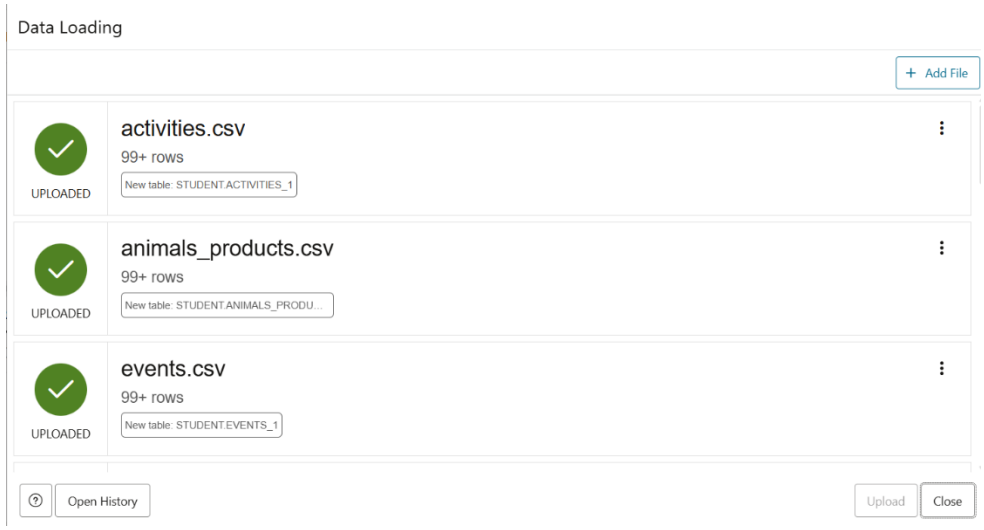

To ensure the correct import of time-related data, modify the column data types from **TIMESTAMP** to either **VARCHAR** or **VARCHAR2**.

Confirm the changes to avoid losing data during the import.

After verifying settings and adjusting column types, click **Upload all files**.

Once the upload is completed, refresh your workspace to confirm the presence of temporary tables. After completing all data insert operations, remember to delete the temporary tables to maintain workspace cleanliness.

<u>if you have already uploaded the CSVs in error, delete the CSV tables before uploading them again.</u>
